

100W Standard Universal Voltage HID Electronic Ballasts for Metal Halide Lamps

For Metal Halide Lamps

100W – ANSI Codes M/C90, M/C140 and M/C164

Technical Features

Minimum ballast temp:....-15°C/+5°F
 Power factor:.....High
 Lamp frequency:.....170 Hertz square-wave
 Harmonic distortion:.....<15%
 EMI/RFI:.....Complies with FCC 18C, non-consumer limits
 Safety:.....UL outdoor type 1, suitable for recessed use
 Thermally protected/Transient protected
 Lampholder min. pulse rating: 4.0kV

Safety Instructions

- Always disconnect power to the entire luminaire before installation and/or removal of ballasts or controls.
- Ballast green wire must be grounded.
- Install per national and local electrical codes.
- Dispose of any replaced ballasts and lamps properly.
- **Do not** connect lamp leads to ground or neutral.

Lamp Maintenance Notice

- To start new lamps or replaced lamps, turn off ballast input voltage for 10 seconds then back on.
- If lamp or wiring is defective the ballast will "shut down" in 1.5 to 30 minutes depending on the fault condition.

Lamp ①		Electronic ballast							Warranty ②	
Output	Type	Input power	Input current	Type	Ref. No.	Input voltage	Mounting/lead exit	Weight	Max case temperature	
W		W	max. A			50, 60 Hz V		ounces	3 years °C	5 years °C
Standard 100W

100	M/C90 M/C140 M/C164	110	0.94 (120V) 0.42 (277V)	M10012-27CK-5EU-J 		188170	120-277	20	<80	<75
							Studs Top lead exit			

Note ① Consult lamp manufacturers for lamp compatibility approval.

Note ② Warranty is based on maximum operating time of 4000 hours per year. For additional operating hours consult with VS.

VS reserves the right to change any of the above performance characteristics without notice.

M10012-27CK-5EU-F

M10012-27CK-5EU-J

Construction notes

- For additional installation and operational information, please refer to: Vossloh-Schwabe Information Documents (VSID).
- Remote wiring guidelines:
 - Each lamp's lead wires must be run in a separate conduit from the input power leads to achieve good EMI performance and maximum remote capabilities. Lamp leads shall not be bundled together, but each set of lamp leads shall be run in its own conduit.
 - Individual lamp lead wires must be used for external fixture wire extensions using wire types SF-2 (equivalent to SEWF-2 or 3071) or SFF-2 (equivalent to SEWF-2 or 3070) or alternately, if approved by VS, high voltage luminaire wire with a 18AWG conductor and a 1000VAC minimum voltage rating. Temperature rating is especially critical if the lamp lead extension wires are directly connected to lampholder terminals.
 - Maximum remote distances: See chart below
The specified maximum remote distances are based on lamp leads run in a minimum 1/2" internal diameter conduit, pipe or flexible conduit. For longer remote distances consult with VS.
 - Using service power cords (types SJ, SO, ST, SV etc.) or metal clad cable assemblies for lamp lead extension wire are **not** recommended as they are not compatible with the above characteristics, can cause starting problems and shall not be used unless VS gives written approval.

Remote Distances and Lead Lengths

Shape	Wattage	Max. Remote Distances (feet)	Wire Color (wire length in inches)									Stripping	Dimensional Tolerances		Mounting Slot Width
			Black	White	Green	Red	Blue	Yellow	Purple	Orange	Case		Lead length
